

# Group 3 Project Update #2

Brenden Granzo, Ryan Jablonski, Evan Dean, and Quadri Jubril

# Project Roadmap

## Sprint Schedule:

- Sprint 1: 
  - Preliminary project activities and deliverables outlined, basic UI created
- Sprint 2: 
  - Github repository connected to Vercel website, project set up in Supabase, and key database components outlined
- Sprint 3: 
  - UI code refactored and QR code scanner implemented, UI 80% complete
- Sprint 4:
  - Build out database, complete UI, and create support page for ticketing system
- Sprint 5:
  - Run all tests to ensure system viability, review failed tests, and create system demonstration

# Current Status

- Refactored UI code to make it more readable/understandable
  - CommonView component
  - ContentWindow displays content based on what page the user selected
- QR Code Scanner is implemented
  - Proof of concept, will be refactored for real use cases as we build out the database
- [Link to site](#)

# Next Steps

- Create remaining UI components with hardcoded dummy data.
- Continue building out database so that we can start creating features like CRUD operations and QR Code generation of applicable assets.
- Create support page linked via an API to a ticketing system like Jira or Todoist
  - Non-admin users can use this to submit support/repair tickets
